PROFILE

Full-stack software engineer and co-founder of Godji Tech (PTY) Ltd, with 14+ shipped projects across web, mobile and infrastructure. I build products end to end: Next.js and React front ends, Django, Node.js and Supabase backends, PostgreSQL schemas, React Native, Expo and Flutter apps on both stores, and the Docker, AWS and CI/CD layer that keeps them live. Recent work includes a national church's member app and back office serving 1,508 congregations, a membership platform for women founders, server-verified Paystack and M-Pesa payments, and four self-built products.

ENGINEERING APPROACH

I enjoy hard problems, high ownership and moving from idea to production quickly. I use AI coding agents and LLM tooling as force multipliers while keeping architecture, security, product judgment and code quality human-led. I care about the unglamorous parts: deployment, uptime, integrations that don't silently break, and automation that removes manual work.

TECHNICAL STACK

Languages: TypeScript, JavaScript, Python, Dart, SQL, PHP, HTML, CSS, C++

Frontend: Next.js, React, Tailwind CSS, Framer Motion, three.js, shadcn/ui, UI/UX

Mobile: React Native, Expo (EAS Build & Update), Flutter, iOS, Android

Backend/APIs: Node.js, Express, Django, Django REST Framework, REST, WebSockets, webhooks, OAuth/OTP auth, LLM APIs

Data: PostgreSQL, Supabase (row-level security, Edge Functions), Prisma, MySQL, SQLite, MongoDB

Payments: Paystack, M-Pesa, Stripe, Shopify Payments, server-side verification and reconciliation

Cloud/DevOps: AWS (EC2, RDS, S3, Route 53), Docker, nginx, GitHub Actions, GitLab, Netlify, Render, VPS, DNS

Other: Shopify, Google Workspace, Gmail API, Resend, Figma, Postman, Android Studio, Xcode, NFC, QR, Bluetooth, UWB

EXPERIENCE

Co-Founder & Software Engineer — Godji Tech (PTY) Ltd *Aug 2026 – Present*

- Co-founded a software and IT company delivering web and mobile builds, e-commerce, business automation, CRM and payment integrations, and infrastructure, from scoping through to production.
- Designed, built and launched four in-house products (The Wedding Library, StayLedger, Tally and Dookie Deluxe) on Next.js, Expo/React Native and Supabase.
- **My ADA** — Built and run the member app for a national church in Mozambique: WhatsApp-style chat and groups, an offline Bible in local languages, M-Pesa giving, QR attendance and tools for leaders of 1,508 congregations. React Native/Expo over Django, DRF and WebSockets on AWS; live on both stores and updated over the air almost daily.
- **ADA Website & Back Office** — Built the church’s bilingual Next.js and Django platform with a two-factor admin console, machine-translated weekly updates, a map of 1,508 churches and ERP integration, on a Docker stack I provision and maintain.
- Own every layer: product design, PostgreSQL schemas with row-level security and database-enforced audit trails, App Store releases and production hosting.

Software Engineer — NEEPS IT Solutions *Dec 2025 – Present*

- Own hands-on technical delivery across architecture, product engineering, infrastructure, automation and client-facing software.
- Built the Neeps Group platform: a public site plus a custom CRM and operations console (leads, deals, inbox, leave approvals, PDF generation, analytics) running as three Next.js apps over one PostgreSQL/Prisma database.

- Built and launched six production websites, including full e-commerce experiences with catalogue, cart and checkout flows.
- Designed an automated data pipeline that replaced recurring manual reporting work and improved operational efficiency.
- Co-developed Neeps Inventory, a Django tool for bulk equipment sign-out with QR scanning and signing links completed on the taker's own phone.
- Deliver React/Next.js applications through Git-based CI/CD and cloud deployments, working directly with leadership to turn requirements into roadmaps and shipped product.

Software Engineer — Female Founders Initiative Global *Nov 2025 – Present*

- Led development of the FFIG membership app in Flutter with a Django/DRF backend, shipped to both the Apple App Store and Google Play.
- Built OTP authentication, four membership tiers, events with multi-tier ticketing and QR verification at the door, payments, a member directory and messaging.
- Delivered an admin console for approvals, moderation and analytics, plus scheduled announcements with timezone handling and email-delivery monitoring.
- Use AI-assisted development and automation to accelerate implementation, debugging and iteration.

Web Developer — AAT Solutions *Apr 2025 – Nov 2025*

- Built responsive production websites using React, JavaScript, HTML5 and CSS3.
- Developed reusable frontend components and interactive prototypes for client projects.
- Worked in an Agile environment using Git-based workflows and code review.

SELECTED PROJECTS

- **The Wedding Library** — Next.js site and Expo iOS app on one Supabase backend: guest RSVPs, designed email invitations, a shared photo album, QR door check-in and a vendor marketplace with quotes and bookings.
- **StayLedger** — Rental handover platform: guests check in and out from a link with OTP (no app or account), inventory reconciliation, an append-only timeline enforced in Postgres, and an Expo owner app with push.
- **Tally** — PWA that turns bank email alerts into pay-cycle budgets and a safe-to-spend figure, using read-only Gmail API access and scheduled Supabase Edge Functions.
- **Dookie Deluxe** — Expo/React Native gut-health tracker with a 0–100 regularity score, an urgency-graded symptom checker, biometric lock and doctor-ready PDF reports.
- **BE Africa** — Next.js 16 agency site with a three.js WebGL fluid simulation and Paystack payments in cedis, verified server-side on status, amount and currency.
- **Nutrir Foods** — Custom Next.js storefront over Shopify, with a Python pipeline generating the full catalogue, variants, metafields and SEO.

EDUCATION

BSc Honours, Information Systems — IIE MSA (Monash South Africa) *2024–2025*
BSc Software Engineering — Eduvos *2021–2023*

STRENGTHS

- Comfortable owning a product surface from ambiguous requirements through architecture, implementation and production.
- Strong product-engineering bias: build, debug, iterate and ship.
- Early-stage/startup mindset with broad technical ownership and high autonomy.
- Actively developing an AI-native engineering workflow around coding agents and LLM-powered tooling.
